Abstract

Other than talent and opportunity, what makes some people more successful than others? One important determinant of success is self-control—the capacity to regulate attention, emotion, and behavior in the presence of temptation. A second important determinant of success is grit—the tenacious pursuit of a dominant superordinate goal despite setbacks. Self-control and grit are strongly correlated, but not perfectly so. This means that some people with high levels of self-control capably handle temptations but do not consistently pursue a dominant goal. Likewise, some exceptional achievers are prodigiously gritty but succumb to temptations in domains other than their chosen life passion. Understanding how goals are hierarchically organized clarifies how self-control and grit are related but distinct: Self-control entails aligning actions with any valued goal despite momentarily more-alluring alternatives; grit, in contrast, entails having and working assiduously toward a single challenging superordinate goal through thick and thin, on a timescale of years or even decades. Although both self-control and grit entail aligning actions with intentions, they operate in different ways and over different timescales. This hierarchical goal framework suggests novel directions for basic and applied research on success.

Students who focus on **long-term growth and persistence** - rather than just outcomes - are **more likely to succeed.**

Self-Control and Grit: Related but Separable Determinants of Success by Duckworth & Gross

Innovation

- Learning is a journey with different paths and stops
- Game mechanics and lessons coexist

Creativity

- Gamified approach to learning
- Storytelling

Planning & Development

Industry-Used Design Process

- *Learning = Adventure*
- *Each unit is a trail, progress measured through checkpoints*
- *Questions → Ingredients → Potions → Profit*

Core Features

- Interactive Quizzes
 - Visual progress seen through climbing the mountain
 - Multitude of subjects to choose from
- Puzzles and Critical Thinking
 - Determining which and how many of each ingredients to match up when creating potions
 - Determining when to collect more ingredients
- Progress Tracking
 - Individual Lessons: Progress bars showcasing accuracy percentage of each checkpoint completed.

Data Handling & Storage

- Firebase Email/Password Authentication
- Firestore Data Storage

Educational game design

ABSTRACT

A common dilemma in educational game design is identifying the right balance between freedom and structure. Too much structure limits constructive learning and curiosity, while too much freedom diverts focus away from the educational content. How can we create a feeling of freedom while encouraging students to interact with learning material? We argue that a compelling, open-world action-adventure game with a branching storyline could provide just the right balance. To test this idea, we created a single-player custom map action-adventure game, Ulfricht's Sword, using the popular Minecraft game. Our objective was that the game would support
